Aeronautics Research Mission Directorate Update with emphasis on Integrated Systems Research

N+2 Advanced Vehicle Concepts & Quick-Starts NRA Pre-Proposal Meeting
February 19, 2010

Ms. Jean Wolfe
Deputy Director
Integrated Systems Research Program
Aeronautics Research Mission Directorate
NASA Aeronautics Portfolio in FY2010

**Fundamental Aeronautics Program**
Conduct cutting-edge research that will produce innovative concepts, tools, and technologies to enable revolutionary changes for vehicles that fly in all speed regimes.

**Airspace Systems Program**
Directly address the fundamental ATM research needs for NextGen by developing revolutionary concepts, capabilities, and technologies that will enable significant increases in the capacity, efficiency and flexibility of the NAS.

**Aviation Safety Program**
Conduct cutting-edge research that will produce innovative concepts, tools, and technologies to improve the intrinsic safety attributes of current and future aircraft.

**Aeronautics Test Program**
Preserve and promote the testing capabilities of one of the United States’ largest, most versatile and comprehensive set of flight and ground-based research facilities.
Why Green Aviation? – National Challenges

**Fuel Efficiency**
- In 2008, U.S. major commercial carriers burned 19.6B gallons of jet fuel. DoD burned 4.6B gallons
- At an average price of $3.00/gallon, fuel cost was $73B

**Emissions**
- 40 of the top 50 U.S. airports are in non-attainment areas that do not meet EPA local air quality standards for particulate matter and ozone
- The fuel consumed by U.S. commercial carriers and DoD releases more than 250 million tons of CO₂ into the atmosphere each year

**Noise**
- Aircraft noise continues to be regarded as the most significant hindrance to NAS capacity growth.
- FAA’s attempt to reconfigure New York airspace resulted in 14 lawsuits.
- Since 1980 FAA has invested over $5B in airport noise reduction programs
Significant Reduction in Environmental Impact of Aviation is Possible

Operations
Estimated Fuel Savings

Continuous climbs and descents (data from top-27 airports):
- 188M gal/year reduction in fuel burn with direct climbs
- 218M gal/year reduction in fuel burn with continuous descents

Direct routing/improved rerouting/collaborative Traffic Flow Mgmt
- 200M gal/year fuel savings

“No-stop” taxi operations (data on arrivals only at 35 OEP airports):
- 15M gal/year reduction in fuel burn
- 1M kg/year reduction in harmful emissions (CO, HC, NOx, SOx)

Vehicle
Estimated Fuel Savings*

Achieving Significantly Reduced Fuel Burn Will Require Integration of Multiple Technologies

Baseline

1 = Hybrid wing configuration
2 = + advanced engine and airframe technologies
3 = + embedded engines with BLI inlets
4 = + laminar flow

* NASA systems analysis results. Reductions relative to B777 with GE90 engines.
## Integrated Systems Research Program (ISRP) - Environmentally Responsible Aviation (ERA) Project

Current Status and Future Plans for ISRP and the ERA Project

• Began Program and Project Implementation on October 1, 2009, however, initial efforts were limited due to a Continuing Resolution until December 18, 2009

• Plan to interact with Industry and Other Government Agencies to strengthen existing partnerships inherited from SFW Project and form new partnerships for ERA

• Continued Roll-out of detailed technical plans at future aerospace meetings and conferences

• Annual Technical Meeting and Presentation of Accomplishments in November 2010
